

LIMBIC CONCUSSION HEALTH ECONOMICS IMPACT TOOL

- *These variables are completed at Initial and Comprehensive Re-Evaluations, except as noted. Collection Schedule – baseline, 1-year-post-index mTBI, 3-year-post-index mTBI, 5-year-post-index mTBI, then every 5 years afterwards*
- *The self-report questionnaires may be completed prior to visit, reviewed by study staff for completeness and reviewed with subject at visit; alternatively, they may be collected remotely, such as over the telephone, if the participant is logistically unable to come in person to a post-baseline comprehensive visit to achieve partial data collection instead of entirely missed visit.*

Health Care Utilization and Disability

- Health Care Utilization Questionnaire developed from literature: Quantitative measures of self- and informant-reported usage of seven domains of medical (hospitalization, outpatient treatment and procedures, assistive devices, and medications) and nonmedical care (home health aides, respite care, and adult day care).
- Documented utilization and costs: The VA Informatics and Computing Infrastructure (VINCI) resource center, which facilitates access to data from the Veterans Information System Technology Architecture (VistA), and additional relevant data sets will be used to acquire all data relevant to the health economics analyses. Given the longitudinal design of this study, updated data will be requested and acquired on an annual basis for each subject.
- Disability Economic Impact; EuroQol Group 5 dimension 5 level version quality of life questionnaire
- VA and DoD Compensation and Pension qualified for: VA records and self-report
- Other Disability Income: self-report of Social Security
